## VIDEO SURVEILLANCE IN THE YEAR 2019

Again, in the year 2019, we continued to monitor the animal presence near the sensors of dynamic traffic signs. With the IR camera traps, we again managed to record large number of individuals of different wildlife species in the direct vicinity of the road section where the third dynamic traffic sign was placed. IR camera traps were placed at Turjak and Jasnica near sensors in the period of two months from 4th April to 22th Maj 2019 and from 11<sup>th</sup> June to 2nd July 2019. The following wildlife species were observed/recorded: brown bear, red deer, roe deer, red fox, European hare and squirrel.
